

AI Coding Agents Are Becoming Standard

2m-webstudio.com

JetBrains' latest survey shows AI coding agents are no longer experimental.

90% of professional developers use them weekly, while 68% use them daily, raising a question about what becomes standard.

90% use agents weekly

90% of professional developers now use coding agents every week.

The screenshot shows a dark-themed web page for JetBrains. At the top left is the JetBrains logo and name. To the right are search and menu icons, and a button that says 'Get JetBrains IDEs'. Below the header, the breadcrumb 'Research /' is visible. The main title is 'AI coding agent adoption in 2026' in large white font. Below it is the subtitle 'Key takeaways from our latest Developer Ecosystem Survey' and the date 'August 26, 2026 • 8 min read'. A horizontal line separates the header from the main content. The main content starts with the sub-header 'AI coding agents are now mainstream' followed by a paragraph: '90% of professional developers now use AI coding agents at least weekly in their work. What started as an experiment has become part of everyday practice.'

AI coding agents are now mainstream

90% of professional developers now use AI coding agents at least weekly in their work, with **68% using them daily**. What started as an experiment has become part of everyday practice.

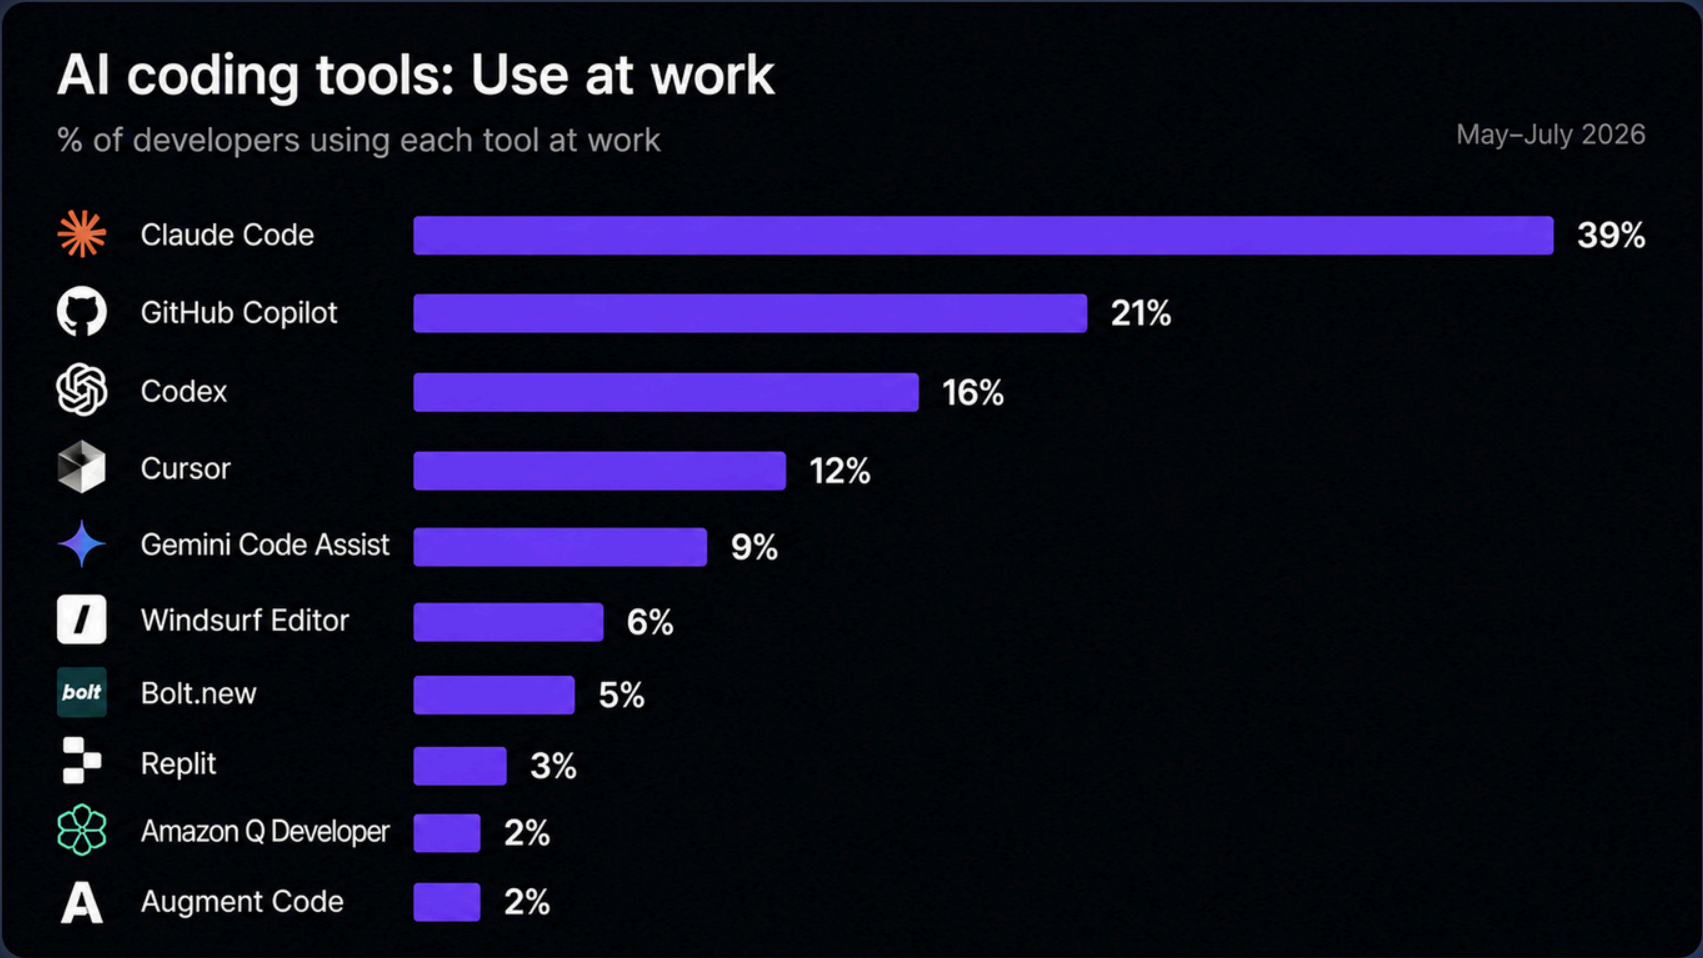

This marks a sharp increase from our 2024 survey, where 59% of developers used AI coding assistants weekly and 24% daily.

Daily usage changes the question from "if" to "how."

How much code do developers really let agents write?

Share of code written by AI agents, according to professional developers

Only **22%** of professional developers rely on AI agents for more than 80% of their code.

Adoption doesn't mean developers have stopped writing code themselves.

So what happens next?

The next advantage may be knowing what to delegate well.

So what happens next?

The next advantage may be knowing what to delegate well.

As AI coding agents become more capable, the real edge may come from **knowing what to delegate well**.

The valuable skill may become managing the agent, not typing.
